Statement of Attestation

Atlassian engaged Bugcrowd Inc. to perform a code-assisted Plus Pen Test of Atlassian's Compass application, Compass Slack application along with associated first party integration forge apps. This document covers the testing period from May 19th, 2025 to June 26th, 2025. To facilitate testing the tester was given full access to all Atlassian internal systems for documentation, source code, logging, staging environment, previous testing data and direct slack communications with Atlassian staff. The assessment was performed by one security consultant who used a combination of both automated and manual penetration testing techniques.

Plus Pen Test is an on-demand methodology-driven penetration test that delivers real-time results and 24/7 reporting in support of a variety of compliance initiatives. A pay-per-project model powered by CrowdMatch technology enables Bugcrowd to draw from a global network of continuously vetted pentesters to deliver faster setup without compromising on skill or experience. To support accelerated remediation and streamline integrated business processes, vulnerabilities discovered during the methodology are viewable live in the Bugcrowd Customer Console as soon as they are submitted by the pentester. Bugcrowd's in-house team of Application Security Engineers works in parallel to validate, prioritize, and push streaming vulnerabilities through customer-chosen SDLC integrations like GitHub, Jira, or ServiceNow. The purpose of this program was to identify security vulnerabilities in the targets listed. Once identified, each vulnerability was rated for technical impact defined in the Findings Summary section of the report.

About Bugcrowd, Inc.

Bugcrowd is the number one crowdsourced security platform, providing on-demand access to the largest global network of heavily vetted, intelligently matched, and expertly incentivized security experts. Our highly integrated platform-powered approach to security testing helps customers like Mastercard and Motorola surface more critical vulnerabilities without the cost or overhead of traditional solutions. More organizations trust Bugcrowd to help them stay one step ahead of attackers through the greatest range of fully-managed security testing programs including Bug Bounty, Pen Test, Vulnerability Disclosure, and Attack Surface Management.

Based in San Francisco, Bugcrowd is backed by Blackbird Ventures, Costanoa Ventures, Industry Ventures, Paladin Capital Group, Rally Ventures, Salesforce Ventures and, Triangle Peak Partners.
